

# **Working Prototype: Known Problems Report**

**newsRank**  
**Royals**  
**06/03/2017**

List of Functions not working correctly:

1. Our classifier is ultimately subjective. It may rank something as reliable that some people think is unreliable or visa versa. Based on our tests, the classifier does sometimes made somewhat odd decisions.
2. Due to the vast array of media outlets its possible that some of them might break our extractor / scraper. Note: I, in my testing, haven't found one that does yet, but it is a possiblity.
3. We removed our TweetPy sentiment analysis when we redid our UI. We decided it wasn't helpful to the overall product. I'm putting this on the list as we listed it as a completed feature in our sprint 2 report.
