5/02/17

Actions to stop doing: We need to stop stepping on each others toes when it comes to github updates. A little bit more communication can go a long way to stop us from breaking each others code.

Actions to start doing: Now that we have Heroku set up we can stop working locally and start using github to push code faster and more efficiently. We also need to start preparing for our acceptance tests and doing our final bug fixing.

Actions to keep doing: Keeping working well together for the last sprint. We also

Work completed:

"User Story 1: As a developer I want to link Django / Github with Heroku in order to have a cloud based application that runs on a common platform (as opposed to having 6 people running locally"

"User Story 2: As a user I want a clean and responsive interface to view"

"User Story 3: As a user I want to be able to see a list of news articles, as well as their reliability ratings (both good and bad)"

Work not completed:

User Story 4: "Build a graph based on TweetPys NLTK returns."

At the time of writing this we also had some problems populating our reliable database, this is likely due to the transition to Heroku.

Work completion rate: We completed 2 user stories, in an estimated number of 23 hours. There were 15 days in this sprint, this figures into a .17 user stories a day with an average time of 1.9 hours a day.
